Legal Electronic Signature API for Regulated Document Workflows

Introduction

Lucile Brunin is the founder and CEO of Alliance Regulatory Limited, a global-minded regulatory compliance company specialising in biocidal products, plant protection products, and related areas. The company is developing AlexSignum, a blockchain-based SaaS platform that generates and manages controlled legal and commercial documents (DSCA, NDA, LOI, and other regulated templates) with full auditability for authority submissions.

Challenges

Alliance Regulatory operates in an industry that requires precision for governed document-generation workflows. “Chemicals companies often need to produce signed legal and commercial documents,” Lucile said. “We were looking for an API-based signing solution that we could embed cleanly into our process with dependable status updates.”

The solution needed to be secure enough to handle sensitive documents, especially since Alliance Regulatory is building a blockchain-based SaaS platform that generates validated legal documents. Lucile tested out a few e-signature solutions before settling on BoldSign.

Solution

As one of their internal tools began evolving into an external platform, Lucile’s team integrated the BoldSign API to make the workflow more reliable. Lucile highlighted the straightforward signing process as a key reason for selecting BoldSign. “What was important is that the user, the signer, will not have to create an account on BoldSign,” she said. “It also allowed us to standardize the external signing layer.”

Industry
Regulatory and Legal Technology

Product used
BoldSign®

Region
Hong Kong

Use case
A regulatory compliance business uses the BoldSign API to implement secure signing in its new external blockchain-based document workflows.

> “If you need signing as a reliable, programmable component inside a larger workflow, BoldSign is a solid foundation.”
>
> **- Lucile Brunin, Founder and CEO, Alliance Regulatory Limited**

Conclusion

Before the BoldSign API, Alliance Regulatory had to deal with unpredictable status updates, extra steps in the signing process, and difficulty keeping its internal workflow synced. Now, the team can move through the signature process with ease. Lucile recommends BoldSign wholeheartedly, especially to “teams that are building something more simple than document signing.” BoldSign has become integral to Alliance Regulatory’s evolving set of tools.
